

## Notes on Social Farm Technology Stack

Orie Steele

The public may access the social farm platform via <http://socialfarm.org>. The web server for [socialfarm.org](http://socialfarm.org) is written in standard python, and designed to translate restful resource requests for couchdb.

These requests should be social network independent, unless necessary, for example, twitter and facebook may require different page structure and client side javascript to allow a member to invite friends to a business.

### URI Mapping from [socialfarm.org](http://socialfarm.org) to couchdb

<a href="http://socialfarm.org/">http://socialfarm.org/</a>	<a href="http://localhost:5984/">http://localhost:5984/</a>
<a href="#">businesses/</a>	<a href="#">socialfarm/_design/business/_view/all</a>
<a href="#">business/{bid}</a>	<a href="#">socialfarm/_design/business/_show/basic_html/{bid}</a>
<a href="#">business/{bid}/members</a>	<a href="#">{bid}/_design/info/_list/members_basic_html/all_members</a>
